PURE DISTINCTION

CREEPING BENTGRASS

Pure Distinction creeping bentgrass - coated option

See over for information on Ready Fast® seed and fertiliser coating on this product.

Key features:

- Excellent resistance to bacterial wilt, brown patch, *fusarium* patch, anthracnose and leaf spot
- Great resistance to dollar spot
- Excellent heat, cold and wear tolerance
- Recovers quickly

Pure Distinction is the latest advanced bentgrass from Pure-Seed Testing. It has a rich heritage that includes legendary Penncross and the groundbreaking Penn A's and G's. Uniquely bright green coloured, Pure Distinction takes the attributes of these bents – dense, upright, and aggressive growth, less thatch and easy maintenance – to the next level. It's the ultimate bentgrass for smooth and true putting greens and ideal for tees and fairways. Pure Distinction also has strong resistance to diseases and outstanding resistance to heat, cold and wear.

The turf to stage the world's greatest endeavours.

Maintenance

These grasses are different and should not be managed as per other bents, but they are tough useful grasses. Summarising this, it means less fertiliser and less water than the old bents that many superintendents are accustomed to and overall the management is easier. The end result is a very high quality playing surface that thrives on low mowing and culminates in a top quality surface, with no extraordinary practices.

Fertiliser formulations and rates may need to be adjusted according to soil test results and turfgrass performance. After the turfgrass has grown in, fertiliser applications should be kept light and infrequent. The first mowing should be done when there is uniform turf coverage with a height from 6 mm and definitely not more than a 12 mm.

Sowing rates

Recommended sowing rate is 1 - 1.5 kg per 100 m^2 (100 - 150 kg/ha) for new plantings.

Overseeding rate 500 gms - 750 gms per 100m^2 (50 - 75 kg/ha).

READY FAST™
Seed + Starter Fertiliser in One

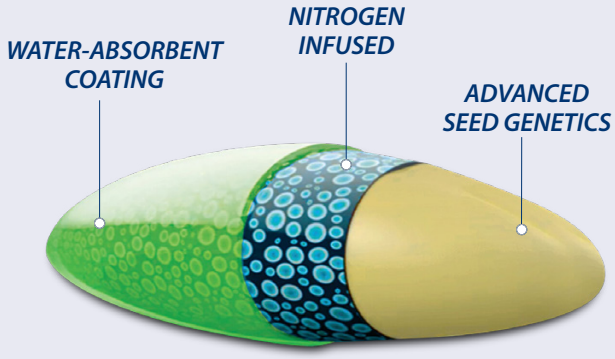

Introducing READY FAST®

Seed + Starter Fertiliser in One

Why Ready Fast ®

READY FAST is a proprietary water-absorbent coating designed to enhance establishment and survivability. READY FAST guards the seedling against environmental pressures and provides special nutrients and water absorption capabilities.

Why the consumer will care

READY FAST seed coating technology paired with premium PST seed genetics helps ensure the consumer will have success in germination and establishment. These advanced seed products provide an easy-to-use, surefire way to establish a healthy dense sward of turf.

Seed coating benefits

Applying key nutrients directly around the seed creates a micro-environment for success:

- Targeted application leading to fewer inputs
- Less runoff of chemicals (better for environment)
- Improved soil health leads to enhanced root development
- More efficient plant uptake of nutrients resulting in a beautiful and healthy lawn

Ultimate water-absorbent coating

Allows for seed to hold and retain a greater amount of water providing the customer quicker germination. Providing that visual satisfaction of their effort is paying off.

Nitrogen infused

Featuring a time-released nitrogen source that is infused right around the seed, making nitrogen available for plant uptake at the exact right time. Seed + Fertiliser-In-One saves the end-user time, money and labour.

The turf to stage the world's greatest endeavours.
